

RoadMap to Master Data Analyst Skills in 3 Months

Created by AI Coach John, CEO of ProITbridge.

Become a Data Analyst by Upskilling Yourself in Just 3 Months – Your Roadmap Starts Here.

This isn't just another roadmap. This is your personalized, no-fluff guide to upskilling and becoming a job-ready Data Analyst...fast!

Built especially for the fresh graduates of 2025 who are serious about landing their first IT job in the **next 4 to 6 months.**

Confused about coding? Don't know where to start? Overwhelmed by career choices? This is your GPS to clarity.

You'll get weekly/monthly checkpoints, skill-based milestones, and alternate paths based on your strengths...whether you prefer coding tools like SQL and Python or non-coding tools like Excel, Power BI, and Tableau.

Reminder: **You're not aiming for MAANG on Day 1.** You're building real-world skills, landing a solid first job, and growing your career from there.

Let's build your future, one skill at a time.

Targeted Job Positions

- Data Analyst
- Business Analyst
- Research Analyst
- Risk Analyst
- Operations Analyst
- Data Analytics Consultant
- Tableau Developer
- PowerBI Developer
- SQL Developer

Salary Range - 2.4 to 4 LPA {Freshers}

Step 1: IT Job Market Survey

99% of the Freshers will exclude this step and that's why they suffer

Step 1	Do research in IT Job Market(Recruitment Sites) and find if we have opportunities, skills expected, Salary offered, etc.,
Step 2	Get IT Job Market Awareness
Step 3	You can take informed decisions here
Step 4	Start with the Commitment and Own the Consequences - Both positive and negative during the process
Step 5	You can win with Consistency in the Plan

Phase 1 - UPSKILL

Month 1 – Python Foundations, Data Handling & Statistics

Week 1: Python Setup, Core Programming & Pandas Basics

Topics:

- Python Installation & Environment Setup
- Explore IDEs: VS Code, Jupyter, Colab
- Jupyter Notebook Basics
- Python Basics: Syntax, Variables, Strings, Input/Output
- Loops, Functions, Conditional Statements
- Python Libraries Exploration: Pandas, NumPy, Seaborn, Plotly
- Python Data Structures: Lists, Tuples, Dictionaries, Sets

Week 2: Pandas Deep Dive, Data Cleaning & Visualization

Topics:

- DataFrames, Series, Indexing, Selection
- Data Input/Output
- Data Cleaning Techniques
- Handling Missing Data
- Data Visualization with Matplotlib, Seaborn, Plotly
- NumPy Arrays, Broadcasting, Indexing

Week 3: OOPS and Introduction to Statistics

Topics:

- OOPS Basics, Classes, Objects, Constructors, Data Input/Output
- Inheritance Polymorphism, Encapsulation, Abstraction
- Statistics and Types, Sampling Techniques, Standard Deviation
- Five Number Summary, Random Variables, Probability distribution

Week 4: Hypothesis Testing**Topics:**

- Inferential Statistics, Hypothesis Testing, Confidence Intervals
 - Population vs Sample, Sampling Methods
 - Types of Hypothesis Testing, Significance value and p-value
-

Month 2 – SQL, Excel and Introduction to Power BI**Week 5: Structured Query Language (SQL)****Topics:**

- Intro to SQL, Basic SQL syntax, Data Types, Primary keys, and Constraints
- Creating and Inserting into DB
- DQL and DML Commands and Data Filtering
- Aggregate Functions and Subqueries
- Group By and Joins, Types of Joins
- Window Functions and Stored Procedures

Week 6: Excel**Topics:**

- Intro to Excel, Interface, Formatting, Cell Referencing
- Basic formulas, Arithmetic Operators and Logical Operators
- Text Functions like Left, Right, Concat etc., & Pivot Tables
- Sorting, Filters and Lookup Functions like Vlookup, XLookup etc
- End-to-end Excel project using a Kaggle dataset for analysis

Week 7: Power BI**Topics:**

- Power BI Intro, Installation, Connecting and Loading datasets
- Power Query, Data Cleaning and Data transformation
- Data Modeling, Schema Design and Relationships
- DAX Basics, Calculated columns and measures
- Data Visualization, Charts, Slicers, and Filters
- Drill-downs, Grouping, Binning and Real World Project

Week 8: Tableau**Topics:**

- Tableau Intro, Installation and Setup
 - Adding labels, formatting, hands-on chart building and in-depth Visualisation
-

Phase 2 - APPLY [1 Month]

Project 1: ABC (Can't disclose)

Title: xxx (Can't disclose)

Skills Used: xxx (Can't disclose)

Extras: (Can't disclose)

Project 2: ABC (Can't disclose)

Title: xxx (Can't disclose)

Skills Used: xxx (Can't disclose)

Extras: (Can't disclose)

Phase 3 - Placement Related [2 Months]

After Upskilling & Applying on Projects

Week 1:

- Build your Resume & Portfolio (GitHub, LinkedIn, Kaggle)
- Record short project walkthrough videos (YouTube or Loom)
- Identify top job portals (Naukri, LinkedIn, Instahyre, Hirect)

Week 2:

- 2 Mock Interviews (Technical + HR)
- Interview prep for:
 - Python, SQL Queries
 - Statistics & Probability
 - Scenario-based Business Questions

Week 3:

- Apply to jobs daily (target 10–15 quality applications/day)
- Attend webinars, workshops, AI bootcamps
- Network on LinkedIn, reach out to recruiters

Week 4 (and beyond):

- Track interview feedback and revise weak areas
- Learn from rejections & keep refining
- Continuously keep working on projects
